

Digisystem

Different hearing problems, different solutions

Conference Microphone DC-10.
Digital sound transfer. Digital sound processing. Impossible to eavesdrop. Filters and stabilizes speech. Removes noise. Hiss reduction. Impulse noise inhibitor.

Microphone Mini DM-05.
One of the world's smallest wireless hearing system microphones.

Microphone Standard DM-10.
Can also be programmed to work as a push to talk transmitter.

Microphone Mix DM-20.
Built in receiver. The sound from another transmitter is mixed with the original sound and transmitted to the listener.

Microphone BT DM-80.
For wireless connection to a Bluetooth telephone

Earset DE-10.
Receiver which attaches to the ear. Listen without a hearing instrument or with a ITE (In the Ear) or CIC (Completely in the Canal) hearing instrument.

Handset DH-10.
Receiver for listening without a hearing instrument or with any hearing instrument equipped with a T-coil.

Connector DT-10.
The world's smallest digital receiver for connection to a BTE (Behind the Ear) hearing instrument via an audio shoe.
